

Beyond the Pandemic and Recession

The Healthcare Sector Acquired the Wings to Fly

What impact has the coronavirus pandemic had on healthcare?

Covid-19 has already taken almost 100,000 lives and 30 million jobs in the U.S. alone. The pandemic has sparked a reckoning through the country's healthcare system, smashing decades-old perceptions about how Americans think about medicine, and the physicians, hospitals, insurance firms, and pharmaceutical manufacturers they pay to deliver it, beyond grinding everyday life to a halt.

Major Shifts in the Healthcare Sector

Accelerated Telehealth

Covid-19 has moved the eventual telemedicine transition ahead by a decade, if not more, according to health care leaders.

Healthcare leaders report their practice has extended Telehealth access amid Covid 19

Traditional Employer-Based Health Insurance

In a floundering economy, employers will be under more pressure than ever to cut costs.

Innovations with Drones and Robotics

In reality, technology can now be the flashpoint for robotics and drones in health care and other sectors, which can be equally incendiary. Often these innovations feel amazing before COVID-19 created a new truth where health, protection, and social distance are the key concerns. They're feeling realistic now, even necessary.

The drone services market is estimated at USD 4.4 billion in 2019 and is projected to reach USD 63.6 billion by 2025 at a CAGR of 55.9% from 2020 to 2025.

Emerging Medical Supply Market - An Outlook

During the first two months of the year, American companies exported more than \$17.5 million in healthcare essentials, more than \$13.6 million in surgical apparel, and more than \$27.2 million in ventilators to China. Far exceeding that of any other comparable time in the past decade, according to the latest international trade data available from the United States.

US exports to China of personal protective equipment have increased

Attractive Medical Equipment Business Prospects

The effect of Covid-19 on the demand for medical supplies is expected to hit nearly 110 billion USD by 2021 from 92 billion USD in 2019 at a 9 percent CAGR during the forecast period

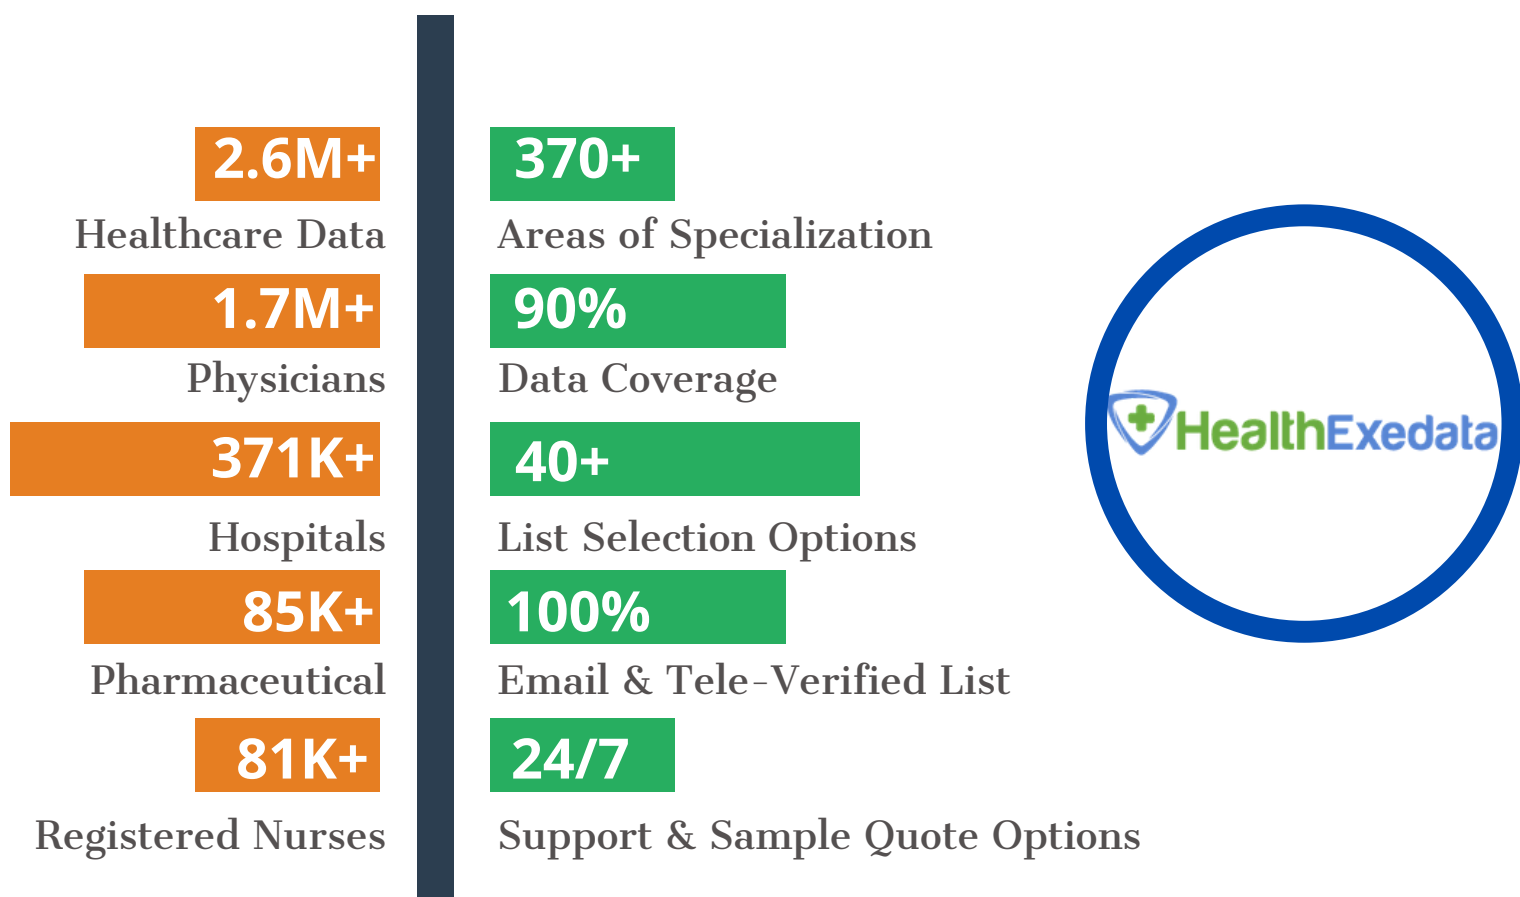

In order to deliver substantial growth opportunities for market players during the forecast period, the repurposing of production lines to produce medical equipments

Growing awareness of environmental and personal hygiene leading to increasing demand for disinfectants, expansion of healthcare settings due to increasing COVID 19 patients, increased global demand for medical equipments, rising demand for ventilators, and increasing demand for diagnostic supplies are the main factors driving market development
